HAVE A BEAUTIFUL LAWN—PLANT DEPENDABLE LAWN GRASS SEED

FANCY BERMUDA GRASS—The most dependable summer lawn grass for Southern Gardens. Makes a tough, even, clumpless turf that recovers quickly after cutting. Lasts for years and stands long, hot, dry summer without injury. Succeeds on nearly all types of soil. Germinates in 20 to 30 days with proper soil moisture. For good, heavy stand, sow at the rate of 5 pounds to 1,000 square feet, from March to September. The Bermuda Grass seed we offer is the finest, leaf cultivated turf producing strain.

Postpaid, lb. 65c; 5 lbs. $2.85.
Write for prices on larger quantity.

CARPET GRASS—Splendid lawn grass for the South. Better than Bermuda for poor, sandy soil and semi-shady lawns. It is a perennial, spreading by creeping stems which root at every joint, thus forming a close, compact turf. Germinates in 20 to 30 days if soil is kept properly moist. For a closely matted lawn sow at the rate of 5 pounds per 1,000 square feet from March until July. We offer only stock that has been carefully analyzed for purity and germination.

Postpaid, lb. 55c; 5 lbs. $2.40.

ST. AUGUSTINE GRASS—In Florida and to an ever increasing extent in New Orleans, the shady lawn problem has been solved by the use of this perennial creeping grass. It is a deep green, broad-bladed grass, creeping by means of surface runner. It is somewhat similar to Carpet Grass, except it has a better color and stays green during ordinary winters. Seed is not available, but lawns are established with rooted runners. A bushel will plant from 150 to 200 square feet, depending on how close it is set.

Not prepaid, bushel $2.35; 10 bushels $22.50.

HULLED BERMUDA—We offer this extra fancy Bermuda Grass with the hulls removed, a new process which gives much quicker germination. Under favorable moisture and soil conditions, Hulled Bermuda Grass will germinate in 8 to 10 days, almost as quick as Rye Grass. It is more economical because half the quantity is necessary to sow 100 square feet of lawn. Be sure to specify hulled seed when ordering, as otherwise the unhulled seed will be shipped.

Postpaid, lb. 80c; 5 lbs. $3.50.
Write for prices on larger quantity.

GARDEN CORN

ARISTOGOLD BANTAM

Culture—Planting time Southern States: February to July. Plant in hills 3 feet apart in rows and rows 3 feet apart, four or five seeds and thin out to 2 or 3. For best success, seed corn should be planted within three days from time of receipt from seed house to avoid trouble from weevils. A pound will plant about 400 hills. One peck to an acre. Approximate number of days to edible condition (roasting ears) on Sweet and Sugar Corn and to maturity on Field corn is given after each variety. This varies with soil and climatic conditions. Corn is often planted some each week during planting season so that the harvest will be throughout the season.

SUGAR CORN

ARISTOGOLD BANTAM—83 days. A true aristocrat of the sweet corn hybrids. Fast growing, makes exceptional yields even in hot, drouthy seasons, because it stands early planting in cold wet soil. Has great resistance to ear worm and smut damage. Stalks 8 to 9 ft. tall and ears extra long with 12 to 14 rows. Sweet, tender and delicious.

GOLDEN BANTAM—88 days. Most widely known early variety, grown in every section, stalks five feet in height, heavy foliage, ears 6 to 7 inches long, eight rowed, with broad kernels of a golden yellow color. Flavor distinctly different. Stools very rapidly and should be allowed to remain as the stools are productive of an ear.

COUNTRY GENTLEMAN—90 days. Stalk 6½ to 7 feet. Ears slim, about 8 inches long. Grains long and irregular, very narrow. Considered by many one of the best corns for family garden. The silk on Country Gentleman ears is always very red and it can be easily distinguished by this feature.

GOLDEN CROSS BANTAM—An outstanding hybrid bred for yield and quality. Large well filled and uniform ears.

COTTON SELECTED VARIETIES

Planting time, March and April. One bushel is required to plant one acre. Thoroughly break and prepare the ground early. Rows should be 3½ to 4 feet apart and hills 12 to 14 inches apart in the row. When the cotton comes up it should be off-barred deep while it is small in order to let the heat of the sun strike the beds. As the plants get larger, shallow down and towards the last, cultivate very shallow. Always keep the top crust of the ground broken in dry weather, as it prevents it from losing its form. Never stop plowing for wet weather until the ground turns in slices; then quit immediately until it dries off. Never lay by until the middle of August. The first week in April has been found to be the best time for planting cotton.

Grows taller than Common, larger plant and coarser, with broader leaflets. Korean matures earlier than other lespedezas, seed beginning to ripen in September. The only variety suitable for Northern half of the United States. Korean is fine in combination with grain for it will drop seed before time to break the ground to sow grain in the fall. Korean is fine in pasture combinations, and an abundant hay yielder.
1 lb. 35c; 5 lbs. $1.35, postpaid.

KOBE LESPEDEZA

Kobe has certainly earned a home for itself on Southern farms, particularly where long periods of drought occurred, for Kobe came through these droughts where Common Lespedeza was burned out. The drought resistance is a life-saver to a farmer, and is no doubt due to the very extensive root system and its rank growth, with larger than ordinary leaves. We have seen Kobe 36 inches tall but usually it is 2 to 2½ feet tall. We have seen yields of 4 tons per acre with Kobe. It is excellent for hay and pasture alike. Can be sown with oats, also with orchard grass and red top or herd's grass.

COOPER'S CATTLE DIP

For Eradicating the Texas Fever Tick
The Safe, Dependable Dip
For Killing Lice on Cattle

Cooper's Cattle Dip is an approved Dip by the Bureau of Animal Industry, U. S. Department of Agriculture, for the dipping of cattle affected with ticks (Margaropus annulata). It is equally effective for controlling lice on cattle. Most cattlemen prefer it to Coal Tar and other Dips for controlling lice on cattle because results are surer and more dependable.

In using Cooper's Cattle Dip you dilute a gallon with 155 gallons of cold water, hard or soft. It is not necessary to heat the water. By using a simple testing device the dipping solution in the vat can be used again and again for many months until it becomes too filthy to use, by adding more water or Dip as may be required to keep the required strength. This saves cleaning the vat after each dipping and also saves Dip.

Cooper's Cattle Dip is highly concentrated, easy to mix, safe to use, decidedly effective and very economical. Don't fail to use it if you are dipping cattle to eradicate lice or ticks.

It is not a pest and can be easily eradicated and reseeds itself each year under favorable conditions. It is used as a summer cover crop and soil builder in groves, orchards, vineyards, etc. Livestock will not eat it, therefore you will not be tempted to cut it for hay when your ground needs it so badly. STRAWBERRY SHOOKS or DIRT BANDS

STRAWBERRY SHOOKS or DIRT BANDS—Eggplants, muskmelons and early cucumbers pay well if they come early into the market. In order to have them early, it is a good plan to start them in a cold frame in what are called "Dirt Bands." This is a box 4 inches square and 4 inches deep, without bottoms. These are placed in a frame and filled with good rich soil, and five or six seeds in each box. When the plants come up, thin them out to one or two in each box. Before using dirt bands, wet them thoroughly before handling or they will be apt to break at the grooves, as they are made of thin veneered wood.

$1.00 per 100; $6.50 per 1,000, not prepaid. Tacks for Dirt Bands and Boxes. ¼ lb. 40c; lb. $1.35, postpaid.

SULFADENE

Don't Blame Fleas, Mange . . . Diet! If your dog itches, scratches continually, it is probably not due to fleas, mange or diet. 2 to 1 it's FUNGITCH, grass-borne fungus infection long a puzzle to science. FUNGITCH starts as an itch followed by dandruff-like scales or sores with brownish edges and mouldy odor—or infection in ears, in paws, underbody, tail or eyes. May lead to most serious results—costly care—even total loss. Now a noted specialist's discovery — SULFADENE — applied externally, stops itching in minutes . . . clears up scales and sores in a few days.

Postpaid, 4 oz. size $1.15.

HILO DIP

HILO TICK CONTROL KIT

Everything you need to control ticks on dogs—homes and kennels.

1. Sponge dog with solution made of teaspoonful Hilo Kiltix (new formula) to pint of water. Kills faster and has residual effect for a week or more.
2. Apply Hilo Tick Ointment between dog's toes and in ears. A great time saver as dead ticks drop off by themselves. The Ointment keeps on killing for about 2 weeks. Recommended for hunting dogs BEFORE they go into tick-infested areas.
3. Use Hilo Tick Spray on walls and in cracks of all tick-infested rooms, cellar, garage, kennel, etc. Leaves a fine film which continues to kill ticks as they crawl up the walls. Do not use on dog.
4. Sprinkle Hilo Tick Powder in dog's bed to control reinfestation. Apply to dog's coat when cool weather prevents use of liquid.

Price: $2.25, postpaid.
